HR Analytics Report

Workforce, attrition, attendance and pay · data as of 30 September 2026 · prepared 10 October 2026

Executive summary

The company employs **1,131** people across 8 departments and 5 Indian cities, up from 1,018 at the end of 2025. Over the last twelve months it hired 307 people and lost 177, an attrition rate of **16.8%** (13.4% voluntary), up from 16.3% a year earlier. Growth is real but expensive: almost one in two leavers goes within the first year, and attrition is concentrated in customer-facing teams and among people working regular overtime.

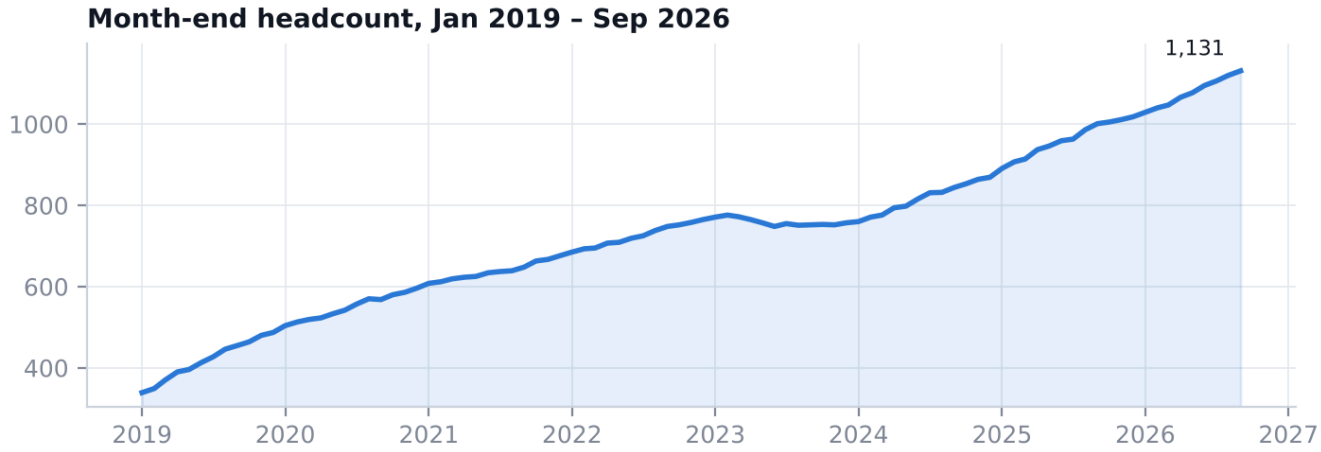

KPI	Value	KPI	Value
Active headcount	1,131	Attendance rate (TTM)	90.8%
Attrition rate (TTM)	16.8%	Absenteeism rate (TTM)	4.10%
Voluntary attrition (TTM)	13.4%	Unplanned absence / employee / yr	6.3 days
New hires (TTM)	307	Average rating (2025)	3.13 / 5
Average tenure	3.5 yrs	Rated 4 or 5 (2025)	36%
Median salary	₹11.0 L	Women in workforce	44%
Annual payroll	₹170.7 Cr	Adjusted gender pay gap	4.8 pts

Key findings

- **Customer Support** has the highest attrition at 20.9% (TTM), against 9.2% in Human Resources.
- Employees on regular overtime have left at **1.6×** the rate of those without it (65% vs 41%).
- Job satisfaction is the strongest single signal: 76% of people who scored 1 have left, against 26% of those who scored 4.
- **45%** of all leavers went within their first year.
- The top voluntary exit reasons in the last two years are better opportunity (25%), work-life balance (21%) and compensation (19%). 75 of the 266 voluntary leavers were rated 4 or 5.
- At the same department and level, men are paid **4.8 points** above women on compa-ratio. The company-wide median shows almost no gap (-0.5%), which hides the like-for-like difference.
- Leavers' unplanned absence rises to 5.0% of scheduled days in their final three months, versus 2.4% for everyone else, giving HR an early-warning signal.

1. Employee analytics

Headcount has grown steadily since 2019, with a pause in 2023 when hiring slowed, and an expansion through 2025 and 2026. The average active employee is 35 years old with 3.5 years of service. Engineering is the largest function; women make up 44% of the workforce overall.

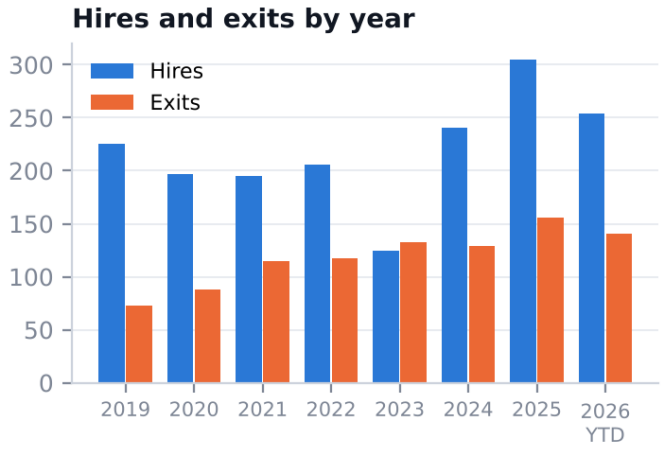

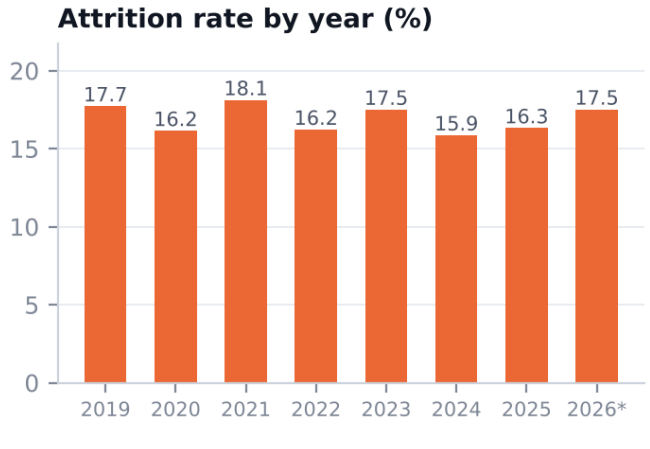

Department	Headcount	Avg tenure	Median salary	TTM attrition	Absenteeism
Engineering	294	3.3 yrs	₹14.7 L	18.5%	3.73%
Customer Support	152	3.3 yrs	₹7.6 L	20.9%	5.08%
Sales	150	3.1 yrs	₹11.5 L	17.9%	4.59%
Operations	143	3.2 yrs	₹8.4 L	20.5%	4.35%
Finance	106	3.9 yrs	₹10.3 L	10.7%	3.48%
Marketing	105	3.7 yrs	₹10.3 L	16.5%	4.03%
Product	102	4.0 yrs	₹14.2 L	11.2%	3.82%
Human Resources	79	4.0 yrs	₹10.6 L	9.2%	3.64%
Company	**1,131**	**3.5 yrs**	**₹11.0 L**	**16.8%**	**4.10%**

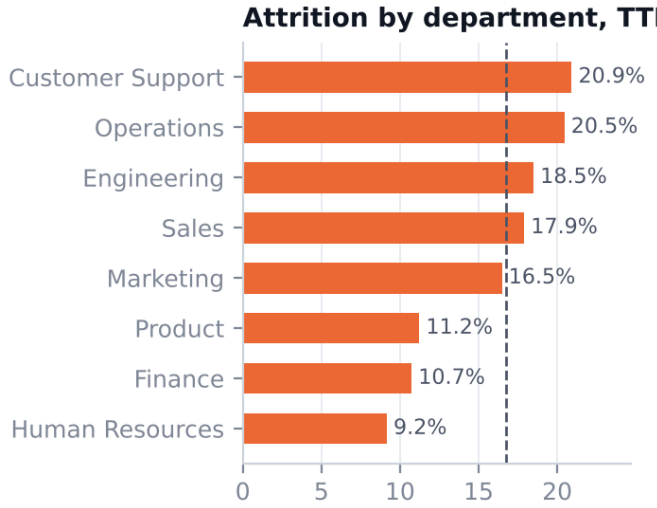

Performance: in the 2025 cycle the average rating was 3.13 and 36% of employees were rated 4 or 5. Among active staff the spread is 1: 4%, 2: 21%, 3: 37%, 4: 29%, 5: 8%.

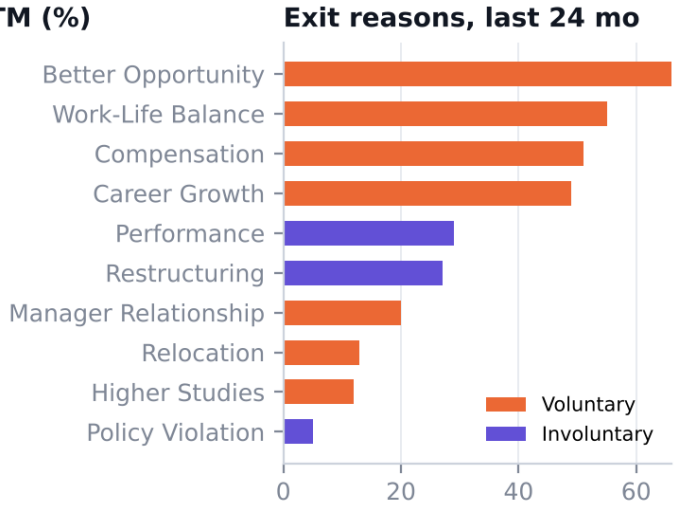

2. Attrition analysis

Attrition rate is exits divided by average monthly headcount, annualised for the partial year 2026. The company has held between 16% and 18% a year since 2019, which is high for a business of this size, while hiring has outpaced exits every year except 2023.

The dashed line marks the company average. Customer-facing and operational teams lose people fastest, and most exits are voluntary: people leave for a better opportunity, pay, or work-life balance.

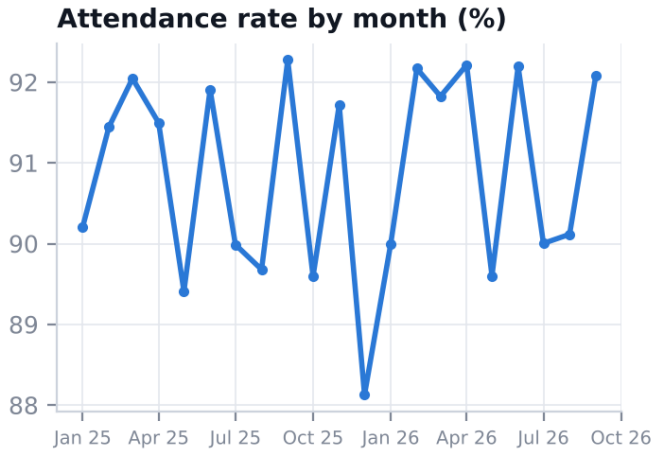

What predicts leaving

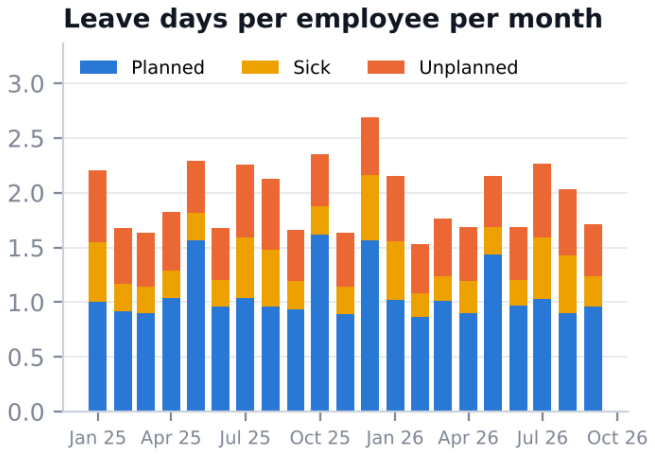

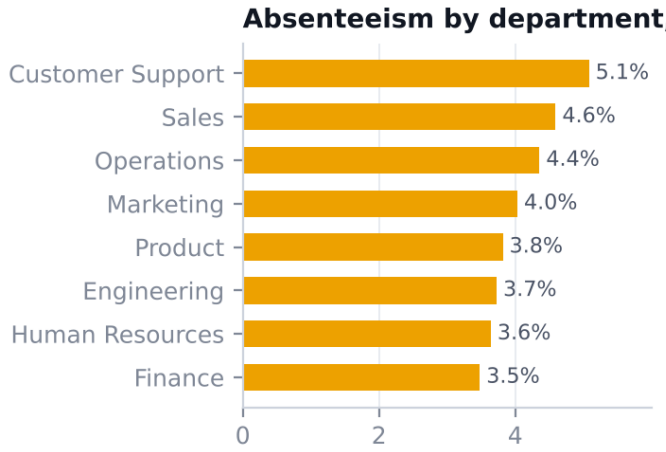

Each bar is the share of everyone hired since 2016 in that group who has since left. Overtime, low job satisfaction and poor work-life balance each roughly double the chance of leaving. Junior levels (L1–L2) leave far more than senior ones.

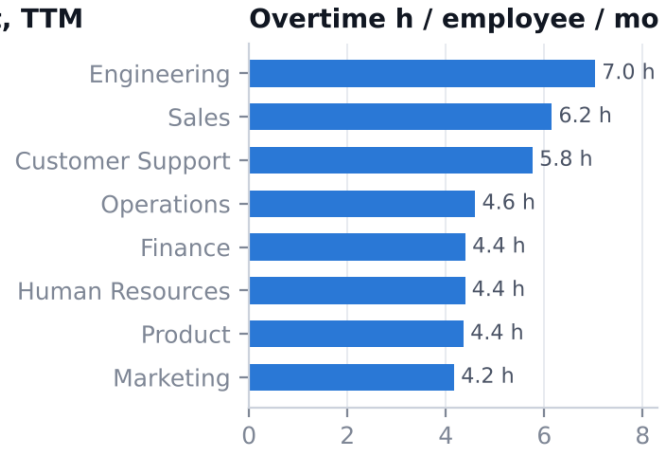

3. Attendance analysis

Over the last twelve months employees were present on **90.8%** of scheduled days. Absenteeism (sick plus unplanned days) was 4.10%, or about 6.3 unplanned days per employee per year. Attendance dips in December–January and in the July–August monsoon months, when sick leave rises; the low point in the period was Dec 2025 and the high point Sep 2025.

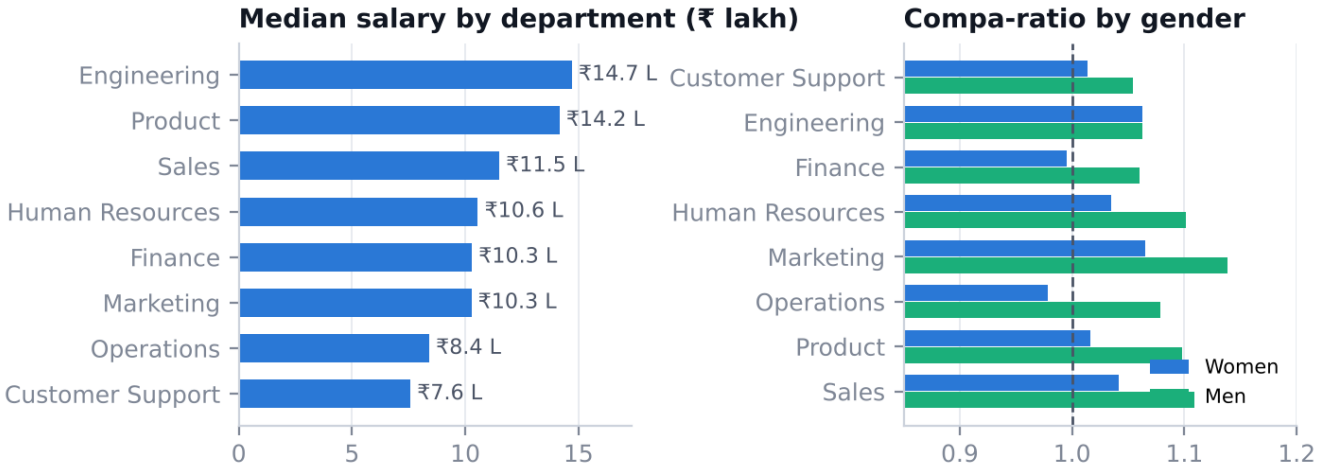

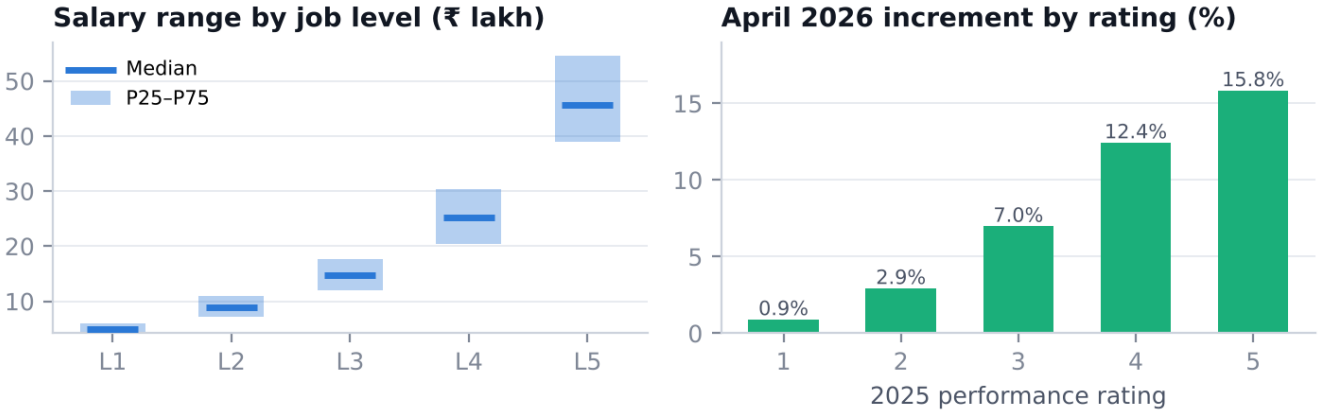

Customer Support has the highest absenteeism at 5.1%, which tracks with its shift-based, on-site work and its attrition. Engineering runs the most overtime. Unplanned absence among leavers climbs to 5.0% in their last three months (vs 2.4% otherwise), so a rising absence pattern is worth a manager conversation.

4. Salary insights

The median annual salary is **₹11.0 lakh** and the payroll run-rate is ₹170.7 crore a year. Pay rises steeply with level, and Engineering and Product pay the most at every level.

Compa-ratio compares each salary with the median for the same department and level (1.00 means at the median). Women sit below men in almost every department. The adjusted gap of 4.8 points is mostly set at hiring, since increments are tied to ratings. 280 active employees (25%) are paid below 0.90 of their band median.

Increments follow performance closely: a rating of 5 earned 15.8% against 2.9% for a rating of 2 in April 2026, including promotions. The pay process rewards performance; the gap comes from starting salaries.

5. Recommendations

- **Fix first-year attrition.** 45% of leavers go in year one. Add 30/60/90-day check-ins, buddy programmes and a structured onboarding plan, starting with Customer Support and Sales.
- **Cap and rotate overtime.** People on regular overtime leave at 1.6× the rate of others. Track overtime hours per team monthly and add headcount where overtime is structural.
- **Act on engagement scores.** Use the flight-risk watchlist in the dashboard (overtime, satisfaction, work-life balance, level, commute, time since promotion) for monthly stay interviews with high-scoring employees, prioritising those rated 4 or 5.
- **Close the gender pay gap at hire.** Set offer ranges by band and audit offers against them. Lifting everyone below 0.95 compa-ratio is costed in sql/07_salary_insights.sql (query 7.7).
- **Review compensation for customer-facing roles.** Compensation is a top-three exit reason; benchmark Support and Sales pay against the market.
- **Use absence as an early warning.** Flag employees whose unplanned absence doubles over a quarter for a manager check-in.
- **Report monthly.** Track the KPI set in this report (sql/08_kpi_report.sql) every month with targets: attrition below 14%, first-year exits below 30% of leavers, absenteeism below 4% and an adjusted pay gap below 2 points.

Data and method

This analysis uses a synthetic dataset generated for this project (scripts/generate_data.py, seed 42). It contains 2,200 employees hired between January 2016 and September 2026, their salary history and yearly performance reviews, and 21 months of attendance (January 2025 to September 2026). Names and figures are fictional, but the generator builds in realistic relationships between overtime, satisfaction, pay position, level and attrition, so the methods carry over directly to real HRIS data.

Metric	Definition
Attrition rate	Exits in period ÷ average of month-start and month-end headcount, annualised
TTM	Trailing twelve months, Oct 2025 – Sep 2026
Attendance rate	Days present ÷ scheduled working days
Absenteeism rate	(Sick leave + unplanned absence days) ÷ scheduled days
Compa-ratio	Salary ÷ median salary of active staff in same department and level
Adjusted pay gap	Average male compa-ratio − average female compa-ratio, in points
Regretted exit	Voluntary leaver whose last performance rating was 4 or 5
